Can glass, a transparent material, ensure privacy?
Is there a way you could say goodbye to clumsy curtains, and their regular maintenance?
Can beautiful blinds stay clean, without collecting dust and requiring regular cleaning?
The answer to all these question is, Yes!
With the new cutting-edge product from India's leading integrated glass manufacturer:
AIS Integrated Blinds System.

How it Works

The AIS Integrated Blinds System is made up of two glass panes and housed within them are the blinds which can be controlled to give full privacy, partial privacy, or be opened completely, at will. The illustration is shown below:

Why AIS Integrated Blinds System?

Privacy can be achieved through a variety of means like curtains, blinds, frosted glass, and many more options. But some of the methods include a compromise on the aesthetic appeal.

And the maintenance and cleaning of the curtains or blinds is another issue. AIS now offers you a solution that takes care of these issues: AIS Integrated Blinds system, which not just ensures privacy, but also adds to the aesthetic value however it is installed, while doing away with the maintenance issues usually associated with blinds.

Advantages of AIS Integrated Blinds System

The AIS Integrated Blinds System is a step ahead of conventional glass ideas and can provide multiple benefits.

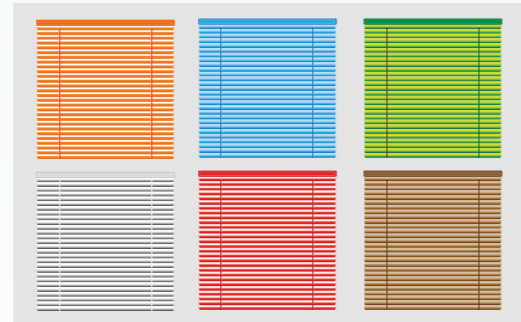

- Varying levels of privacy, as per your needs, to suit you in any kind of scenario
 - Full privacy, i.e., 100% opacity, can be achieved by fully closing the blinds
 - A semiprivate environment can be achieved by tilting the blinds, or partially opening them up to let in light
 - A complete view of the exterior and full transparency can be achieved by fully raising the blinds
- Ease of usage is a key concern and that's why AIS provides the option to control the blinds manually or by automatic systems
- Maintenance of blinds is a very tedious task and people tend to avoid it as much as possible. Since the blinds are within a sealed glass unit, the cleaning and maintenance of the blinds is no longer an issue
- Any glass from the AIS glass range can be selected for use with the AIS Integrated Blinds System with the additional choice of blinds and colours which helps in improving the aesthetic appeal as per requirement
- With the correct glass combination, acoustic insulation can also be achieved with the AIS Integrated Blinds System

Features:

- Wide choice of glass: Custom-manufactured with various kinds of glass products — tempered, heat-strengthened, tinted, laminated, and more
- A range of different blind types to choose from — like venetian, rollers, or blackout blinds
- Available in multiple colour choices for the blinds, like metallic coloured, fabric, etc.
- The blinds can be controlled manually or via remote switch, based on preference
- Thermal insulation due to the system being a DGU, which helps in energy-savings

How to Use

AIS Integrated Blinds System gives you the option of choosing how to operate the blinds

Method	Description
Cord Control	A cord is attached to the unit which can be used to tilt, raise, or lower the blinds
Motorised	The blinds are powered by a motor which can be controlled by a switch or remote

Note: The tilt operation is only possible in Venetian Blinds

AIS Integrated Blinds System in Homes

AIS Integrated Blinds System can be used for a variety of home applications.

Windows

When you choose AIS Integrated Blinds System for your windows, you benefit on multiple fronts – you have the flexibility of doing away with traditional curtains and blinds obstructing your view, and also the comfort of blocking heat and the glare when you need to, saving air conditioning costs during summer. Bathe your room in soft sunlight during the day and let in the glow of moonlight at night.

Partitions

Give your transparent walls the AIS Integrated Blinds System factor. You can lower the blinds for complete privacy and open them up when you need full visibility or a semiprivate view by using the tilt functionality of venetian blinds. Privacy solutions from AIS are best for homes where transparent walls lend a rich and refined feel to the décor.

Home Theatres

Using the AIS Integrated Blinds System with blackout blinds in a home theatre system completely removes the outside light when lowered which helps in enhancing the experience of your movie to that of a movie theatre.

AIS Integrated Blinds System in Commercial Spaces

AIS Integrated Blinds System is not only a home use solution, but it can also be used in commercial spaces such as offices, hotels, hospitals, retail outlets, etc.

Conference Rooms and Cabins

To prevent someone from looking in and seeing confidential information or presentations, lower the blinds and create complete privacy. Use the blackout blinds to enhance the experience of presentations.

Façade Glass and Windows

It is known all too well that air-conditioning and lighting comprise the biggest overheads in the maintenance of commercial spaces. AIS Integrated Blinds System can address this issue when it is used for façades or windows as it is essentially an IGU, thus saving power and bringing down the overall costs.

Salons and Spas

Selective privacy areas are crucial in many spaces. The bulkiness and inelegant looks of curtains are removed by the use of AIS Integrated Blinds System which provides a stylish and elegant solution.

Hospitality / Medical Facilities

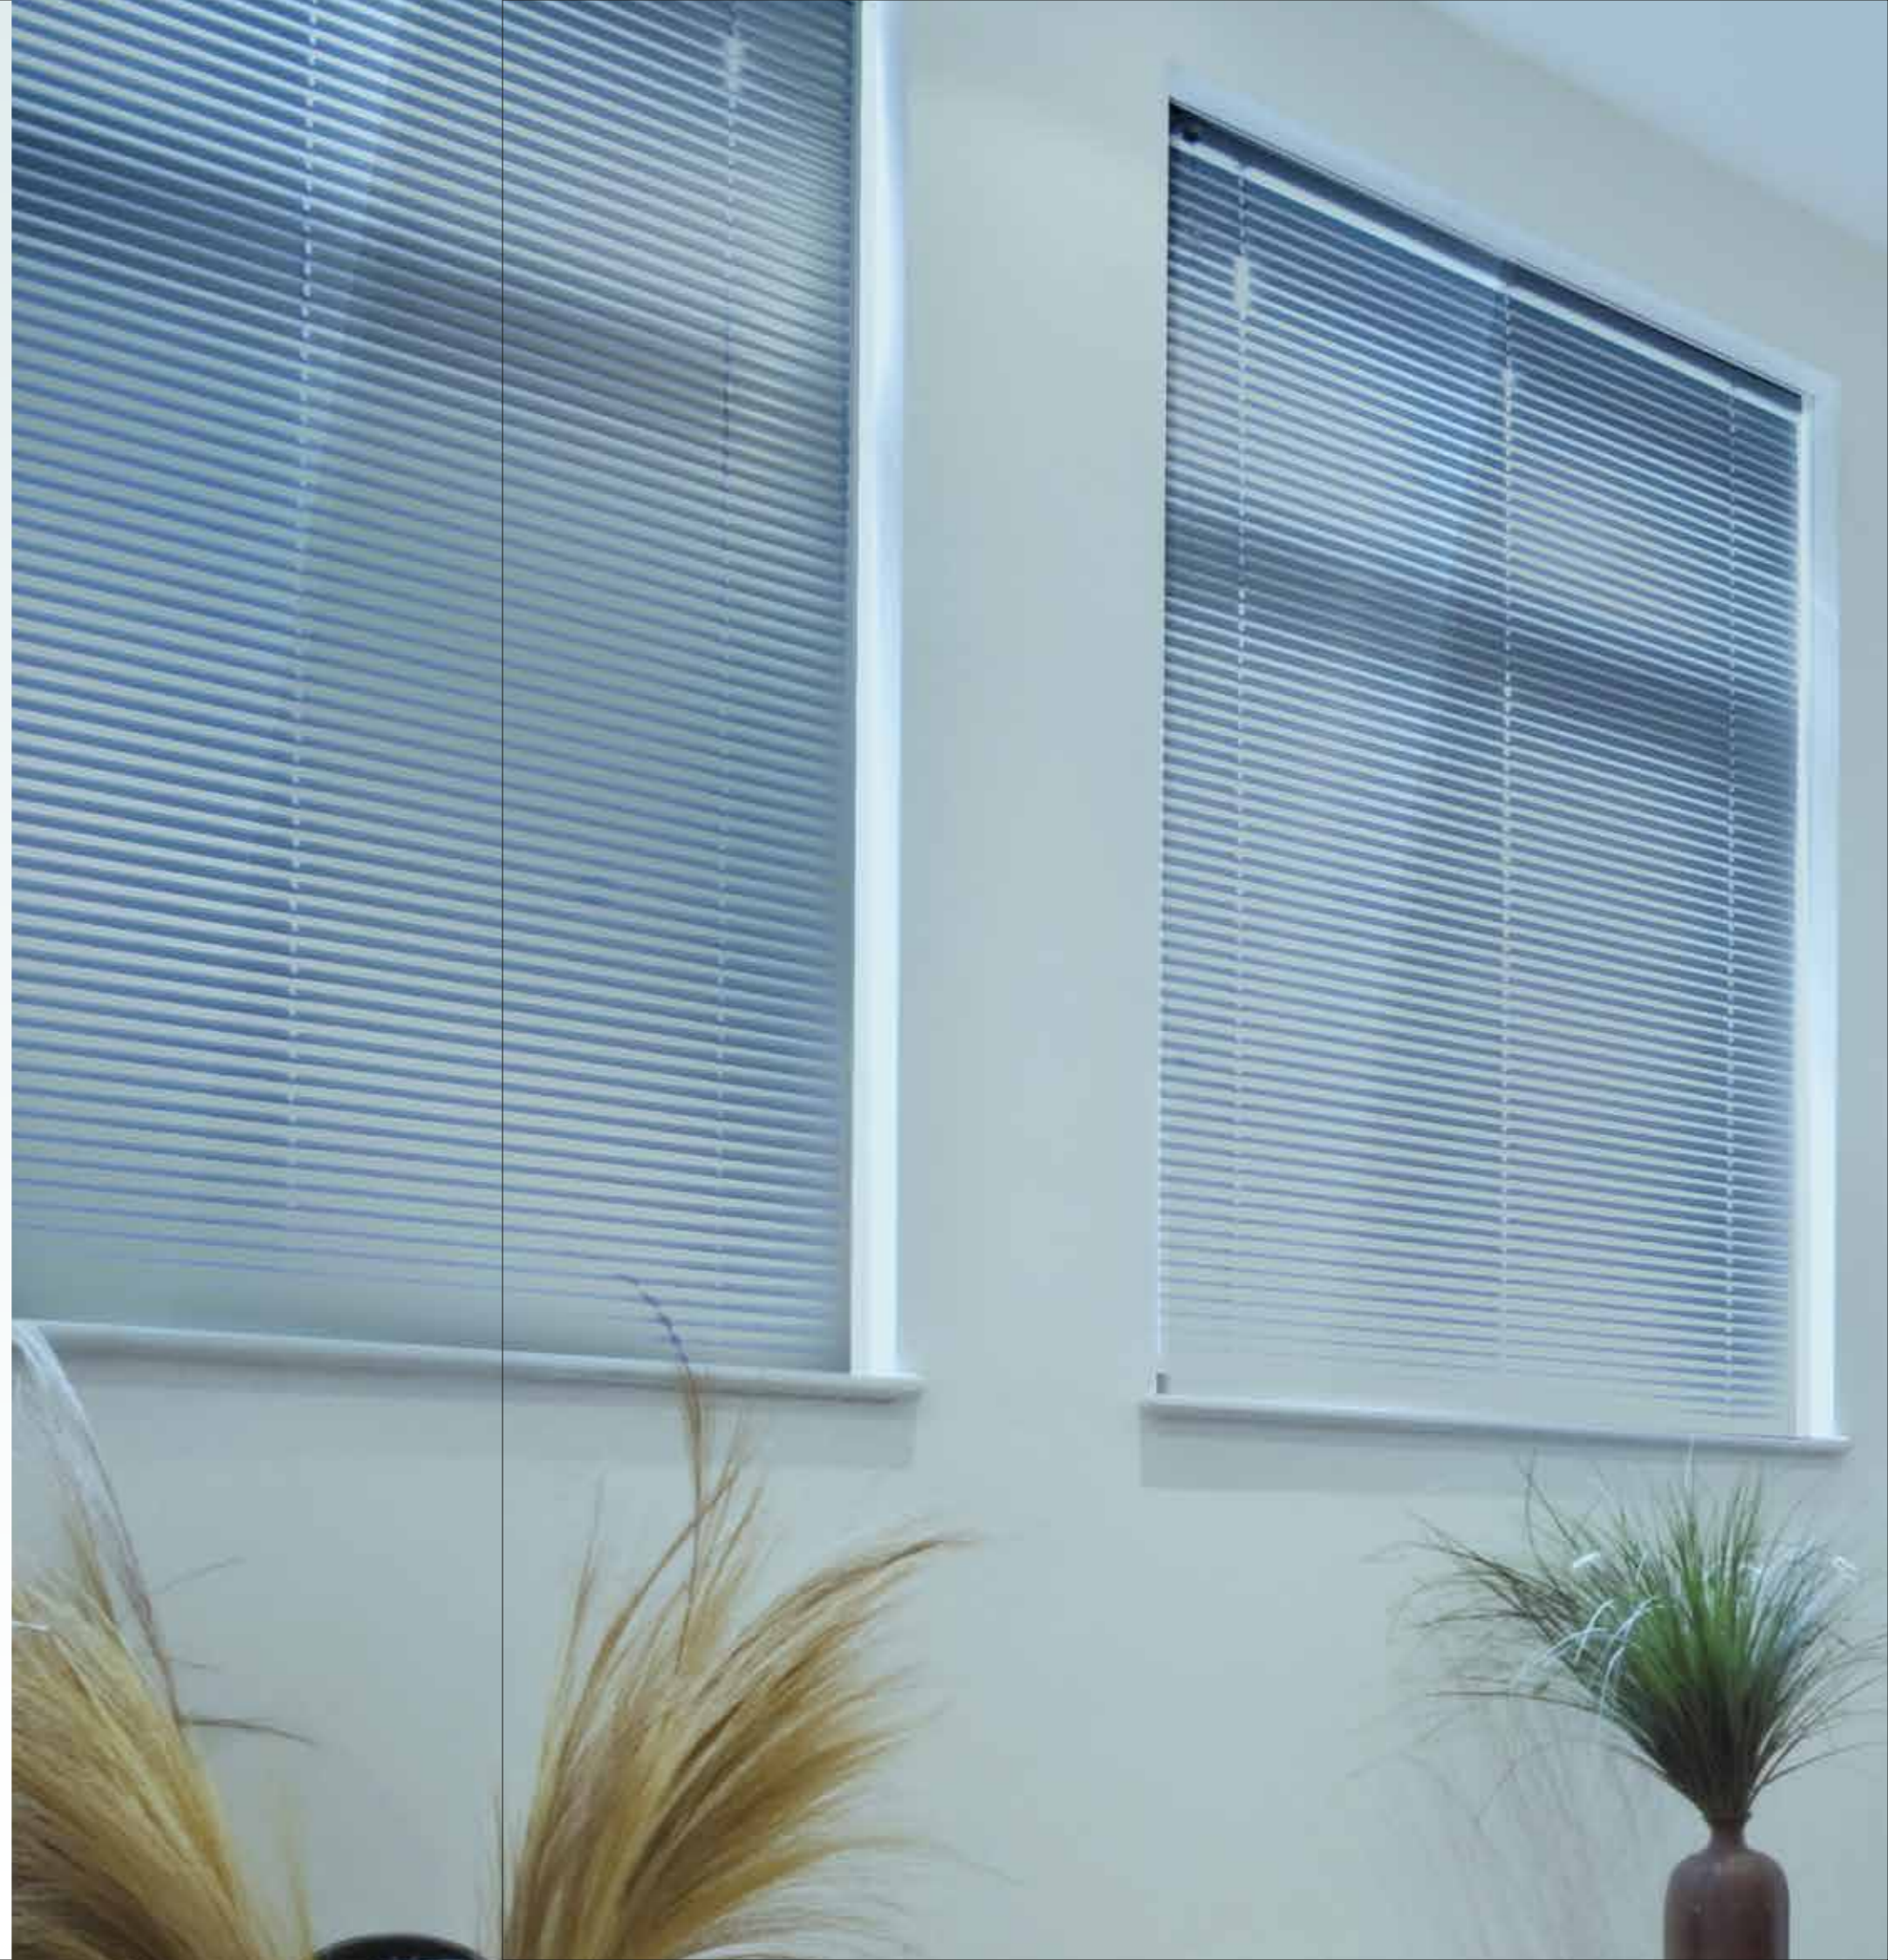

The AIS Integrated Blinds System is also suited to the hospitality sector right from restaurants to pubs, bars and clubs, business centres, conference facilities, hotels, and also in medical / dental clinics. It can serve as a simple yet elegant replacement to traditional curtains, partitions, and opaque walls.

Educational Institutes

AIS Integrated Blinds System can be utilised in universities, schools, or even nurseries for maintaining privacy in classrooms, labs, and lecture halls, while providing a good aesthetic appeal.

Retail Environments

In showrooms and storefronts, the noise from outside can be distracting for customers and the employees. With AIS Integrated Blinds System this problem can be avoided. It can also be used for showcases.
