

## SWITCHCABLE GLASS

Asahi India Glass launches Swytchglas, a special glass that can be turned from transparent to translucent and vice versa with the press of a button. Made using polymer dispersed liquid crystal (PDLC) film, it can be operated with remote or manual control switch. The switchable glass also performs as an anti-theft protection glass since the interlayer behaves as a security film resisting any kind of intrusion or impact. It is ideal for modern conference rooms and personal cabins and spaces.
