

Solar reflective glass from AIS

Asahi India Glass Limited (AIS), a leading integrated glass company, has expanded its existing portfolio in the architectural glass segment with the introduction of a new shade under its range of hard-coat reflective glasses. AIS Opal is a solar control heat reflective glass, manufactured using cutting-edge CVD technology which makes it a long-lasting and durable glazing solution. The product's solar control characteristic reflects heat, and prevents a large part of it from entering the building. Owing to its heat reflective and solar control properties, AIS Opal makes it the best choice for exterior

glass. The product is presently available in 3.5 mm, 4 mm and 5 mm thickness. The product was earlier available in 5 shades – Cool Green, Pearl Grey, Golden Bronze, Royal Blue and Aqua Blue. AIS have now unveiled one more shade under this brand – Olive Green, expanding the customers' choice to create sophisticated and contemporary exteriors.
