

AIS Ecosense – High performance energy efficient glass

[AIS Ecosense](#) is a unique range of high performance [glass](#) in natural shades available as Enhance (Solar Control) Exceed (Solar Control Low-E [Glass](#)), Essence (Low-E) and Edge (solar control [glass](#) & thermal insulation – Low E [Glass](#)).

Ecosense is an advanced way to achieve that delicate balance between the outdoors and the indoors, [aesthetics](#) and economics, function and finesse. Developed to suit the unique climatic conditions of the Indian subcontinent, Ecosense meets the needs of the Indian consumers who traditionally require more cooling than heating and want to prevent solar radiation from coming in.

It is an amalgamation of energy efficiency and optimum day-lighting, where architects can actualise a state of mind that captures intelligence in every sense – architectural sense, aesthetic sense, economic sense, energy efficiency sense and environment sense.
