

# Knock the 'Glass'

*Nowadays people are going for the glass doors to enhance aesthetics without compromising on safety and security*

People devote a lot of time to take care of their house and make efforts to enhance its beauty as and when required. This enhancement begins from the entrance door which can be made into different designs based on the profiles and materials being used. Door profiles are either made of wood, aluminium or upvc (un-plasticised poly vinyl chloride) onto which nowadays people are going for glasses to enhance aesthetics without compromising on safety and security. Various kinds of glasses are used like designer glass, pvb laminated glass, fabric laminated glass, safety glass, etc. which can be fitted inside wooden, aluminium and upvc profiles.
